

V-Band Clamps for Exhaust Systems

V-band clamps provide a compact and dependable solution for connecting exhaust pipes, turbochargers, silencers, DPF units and other circular components.

Selecting the correct clamp requires more than confirming its diameter. The flange profile, operating temperature, material grade, corrosion exposure and tightening system must all match the application.

Key benefits include:

- ✓ Even circumferential clamping
- ✓ Secure flange alignment
- ✓ Quick assembly and removal
- ✓ Compact installation
- ✓ Reliable performance under heat and vibration

Invicta Clamps supplies standard and customised V-band clamps for commercial vehicles, automotive exhaust systems, agricultural machinery, construction equipment and industrial applications.

Send us your drawing, sample, dimensions or OEM reference to discuss your requirements.
